Figure 1. The effect of the *h* parameter on the estimated value of β for the β parameter in the β parameter. The figure shows the estimated value of β for the β parameter in the β parameter. The x-axis represents the h parameter, and the y-axis represents the estimated value of β . The curve shows that the estimated value of β increases as h increases, starting from approximately 0.5 at $h=0$ and reaching approximately 0.8 at $h=1$.
